ries, yet had to go to market to buy fruit of an illiterate market woman, who never read in her life, but raised five times as much threw them over the fence into the street. Her neighbors, aware of her success, picked up the cast away plants and planted them; they bore never a single berry. The old woman's object was to deceive them. It was the male strawberries, whose blossoms were largest, that the old woman threw over the fence, keeping just gentlemen enough in the bed for the ladies.

Mr. L. was ridiculed because he was green enough to believe in the old woman's sexual character of the plants and published them. But the market gardeners, who were aware of her success, became converts, and the fruit went down to one-third its former price. From seed, nearly all are pure male or fe-

male plants. A portion perfect in male organs, (stamens,) and more or less perfect in female organs, (pistols,) and bear more or less perfect fruit, more or less deformed ones, and more or less entirely barren. These, hermaphrodites, were the only kind known in Europe, till, enlighted by our market woman, for, as the great Linnæus and his followers held the doctrine, wise men could not be expected to believe an ignorant market woman wiser than themselves.

Mr. L. talks of his seedlings, the Prolific, McAvoy's Superior, and the Extra Red: The first is hermaphrodite and the only plant we have ever seen that bears a full erop of large, perfect fruit. It not only is attentive to its own flowers, but to all flowers in its vicinity, and pistillate plants require no other impregnator in the garden. The males, having no children to attend to, run at random, and soon kick all the women out of bed. If the Prolific should do this, the cultivator would sustain no loss, as no pistillate is as vigorous a grower. None bears a larger crop or larger fruit.

"McAvoy's Superior I deem the best of all pictillates. But she is not a Mormon. She is not willing to be one of the hundred wives, even to the head priestess. If far separated from plants with male organs, many berries are imperfect. I should plant every third row with the Prolific. Many deem a rich, loose loam best for strawberries. I mix with my rich garden mould one-half of the poorest and stiffest clay I can find. The result is, plants of much larger growth that stand dry weather, bear more and larger fruit, and the plants are never thrown out of the ground in the spring when the ground thaws.

"The Extra Red is not equal to the Probeauty of color, and an immense bearer, and very valuable as a market fruit.

"The Superior, if taken to market, re-

sent him by McAvoy, and was first known as Schneike's Seedling.
"A premium was offered by our Horti-

cultural Society for a Seedling Pistillate, superior to Hovey's Pistillate, or any other

How to Make Cows Easy Milkers. FRIEND MOORE: There may be many of FRIEND MOORE: There may be many of your thousands of readers who have cows hard to milk that are not aware how readily they can be made to milk easily, and I will impart the information for their benefit. For a sixpence, a blacksmith will draw you out a piece of cast steel the eighth of an

inch round, flattening it an inch at the end to about a fourth of inch wide. You can glind it to an edge on both sides, making a bevel in the middle. If your cow is wild cast her, and insert the lance about an inch. It is not a very painful operation to the cow, and the wound will very soon heal. The milk will be bloody two or three times. I have a cow that had a ligament grow in the test so that not a drop of milk could be got.
